Critical Environment Monitoring for Healthcare

Ensure patient safety and improve quality control with remote temperature monitoring. Gain peace of mind knowing that operations are in compliance, equipment is being monitored, and medications are maintaining their efficacy.

Preferred Vendor for McKesson Specialty Care

MCKESSON

A Complete Monitoring Solution

NIST certified sensors **ensure compliance** with documented proof of inventory temperature and humidity levels.

Drive efficiency by eliminating manual temperature checks and giving time back to physicians to care for their patients.

24/7 temperature monitoring with alerts enables real-time visibility into refrigerator and freezer performance.

Centralized reports and temperature logs are instantly available for audits or inspections, and provide proof of temperature performance.

Leverage **rich analytics** to identify underperforming equipment to prioritize maintenance requests.

Ensure medication efficacy with 24/7 remote monitoring and real-time alerts, leading to improved patient safety.

Customer Proven. Measurable ROI.

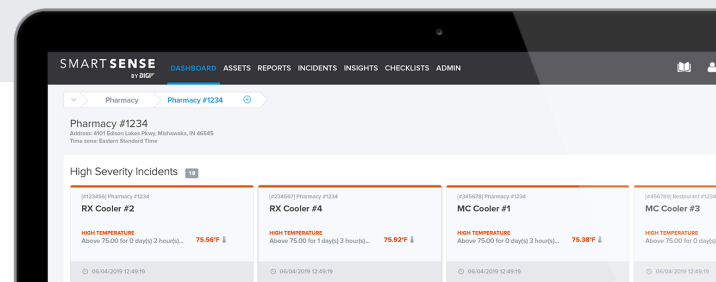

Ensure medication efficacy to maintain quality control and improve patient safety initiatives.

Automated reports provide easy audit readiness for TJC and state inspections.

Make proactive decisions enabled glycol probes that provides insight into actual product temperature.

Centralize Monitoring of Remote Sites

Temperature management is crucial in maintaining the appropriate temperature of valuable, expensive drugs, vaccines, and biologics. SmartSense can help protect these investments for improved patient care and safety. SmartSense exceeds the CDC Guidelines on Vaccine Storage, along with VFC twice daily requirements.

Gain complete visibility into remote sites at scale, and ensure that every site performs to the same standards as your best site. Spend less time visiting individual facilities to review paper logs, and spend more time improving your operations.

A Pharmacy

Ensure refrigerators maintain temperature, and monitor ambient air and relative humidity.

B Operating Rooms

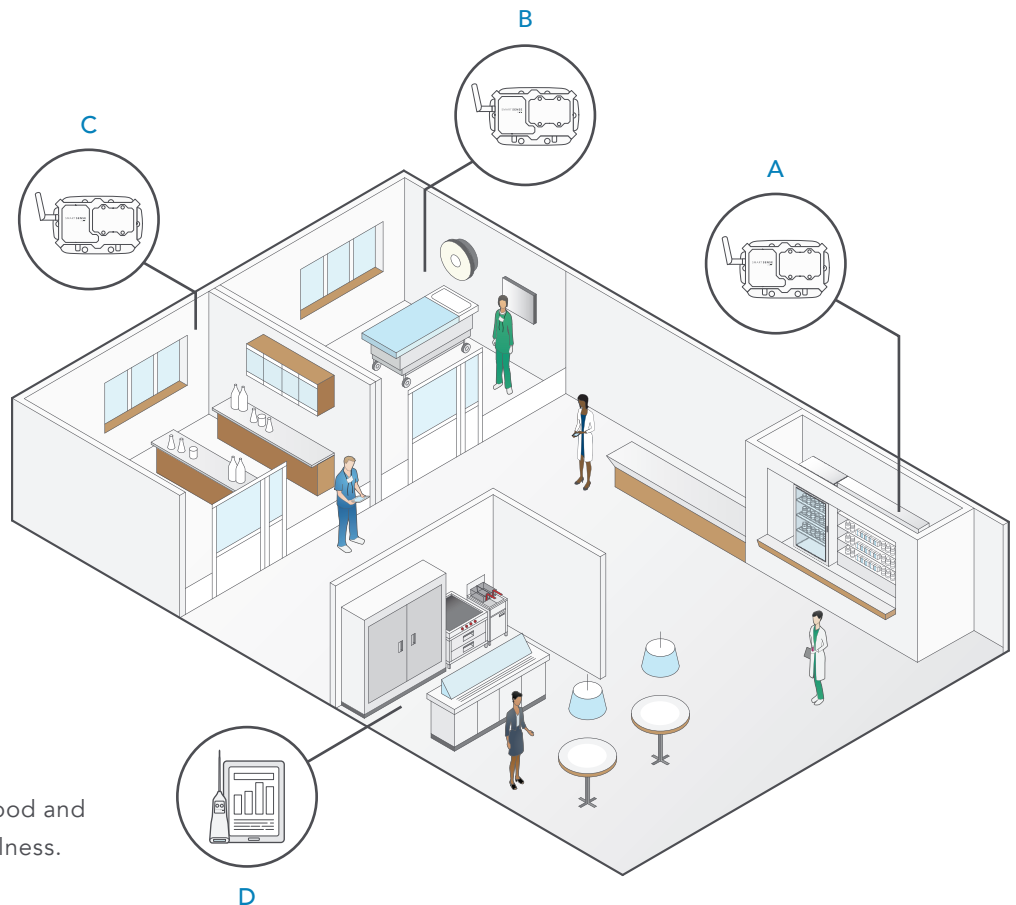

Monitor entire rooms, including ambient air temperature, relative humidity, and differential pressure.

C Laboratory

Maintain the integrity of products, reagents, biologics, and samples collected.

D Dietary

Ensure patients are served safe food and help protect against foodborne illness.
